HOMMIE ANALYSIS

CHICAGO @ MIAMI

6 SEP 2026 | 12:40 PM CT | loanDepot park

Unofficial sample · Before first pitch

THE MATCHUP

Chicago

12:40 PM CT

Miami

STARTER | CHC
Clay Holmes

STARTER | MIA
Tyler Phillips

1 · WHICH WAY IT LEANS

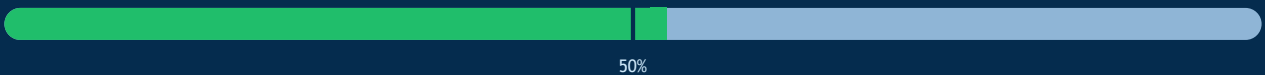

Hommie leans toward Chicago

CHC

52.7%

MIA

47.3%

50%

2 · HOW CLEAR THE READ IS

Medium clarity

There is an edge, with details worth checking.

Low

Medium

High

The percentages compare each team's evidence.

They don't say who will win.

THE COACH'S READ

I see Chicago with the advantage here. The starting pitcher, offense, and lineup batting support the read; sweep context moves Recent Form toward Miami but does not change the direction of the analysis.

STATUS

Official lineups confirmed.

3 • WHY

The read, explained clearly

1

Clay Holmes enters with a 2.09 ERA and 3.21 FIP; Tyler Phillips has a 3.43 ERA and 4.47 FIP. The advantage holds even after accounting for luck.

2

Chicago carries a .772 OPS, the best mark among all 30 organizations; Miami is at .723.

3

With lineups confirmed, Chicago's batting order is better positioned against the opposing pitcher's handedness.

WATCH OUT FOR THIS

The read is narrow, and the sweep pattern favors Miami within Recent Form. Hommie accounts for it without presenting it as a promise or a reason to change sides.

HOMMIE TRANSPARENCY

Official lineups confirmed. This read expresses a reasoned preference and may change if new information appears before the game. The percentages compare each team's evidence; they don't say who will win.

COACH COMMENT | ONLY WHEN THE RULE IS ACTIVE

What experience tells me

This comment describes observable series context. It does not promise that the team will avoid the sweep, and it does not change which way the read leans.

SWEEP GAME · GAME 3 OF 3

Chicago leads the series 2-0: CHC 6-1 MIA · CHC 6-5 MIA

"Chicago has the deeper lineup, and my read reflects that - I am keeping it. But I have seen plenty of series end this way. Miami is down 0-2 and wants to avoid the sweep, and a team in that spot comes out giving everything. I am accounting for it, and I still land on Chicago."

WHY IT APPEARS

The sweep rule is active because this is the final game of a three-game series and Miami enters down 0-2. The adjustment sets Recent Form to even, with no edge for Chicago; by design, it cannot change which way the read leans on its own.

SAMPLE TRANSPARENCY

This was an experimental test read, not an official read. Miami won 10-3. The report keeps the pregame analysis without changing it after the result.

4 • RUNS ANALYSIS • EXPERIMENTAL

Runs analysis

Hommie estimates how many runs the game could have with a separate analysis. It does not pick a winner and does not change which way the read leans.

WHAT HOMMIE EXPECTS

9.1

RUNS

HIGH

versus 8.5

Hommie expects a 9.1-run game

A normal range would be 5 to 13 runs

SEPARATE FROM THE WINNER READ

It does not change which way Hommie leans.

The 8.5 reference is a fixed internal number used to read High or Low.

EXPERIMENTAL • NOT CALIBRATED

This part is not calibrated yet

Experimental: this part is not calibrated yet. It is separate from the winner read and does not change it. It may change if new information appears before the game.

THE FACTORS HOMMIE CHECKS

12 Hommie factors

Each factor shows which way it points, without numbers. They are listed alphabetically.

Bullpen	Slightly favors CHC	Home Field	Slightly favors MIA
Lineup / Injuries	Even	Matchup	Slightly favors CHC
Offense	Favors CHC	Park Factor	Even
Player Batting	Slightly favors CHC	Recent Form	Even
Situation	Even	Starting Pitcher	Favors CHC
Umpire	Even	Weather	Even

HOW TO READ EACH FACTOR

- Favors a team: the factor clearly points to that side.
- Slightly favors: it points to that side, but only by a little.
- Even: the factor does not lean either way.
